IN THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application

Listing of Claims:

- 1. (Currently Amended) An antenna device comprising:
- a substrate;
- a ground conductor provided on the bottom surface of the substrate;
- a radiation conductor, with a partial cutout, provided on the top surface of the substrate;
- a ground terminal provided in the partial cutout of the radiation conductor;
- a conductor to connect the ground conductor with the ground terminal;

and

a feed terminal connected to the radiation conductor, wherein the ground terminal and the feed terminal are connected to an IC chip, and a slit is provided between the radiation conductor and the feed terminal.

Claim 2 (Cancelled)

- 3. (Original) The antenna device of claim 1, wherein a width of the radiation conductor differs between in a central portion and in both broad sides.
- 4. (Original) The antenna device of claim 1, wherein the radiation conductor is formed meandering in the central portion and flat in both broad sides.
- 5. (Original) The antenna device of claim 1, wherein the radiation conductor is formed spiral in the central portion and flat in both broad sides.
- 6. (Original) The antenna device of claim 1, wherein a dent is formed between the ground terminal and the feed terminal, and the IC chip is embedded in the dent.

- 7. (Original) The antenna device of claim 1, wherein a step is provided on a surface of the substrate, and mounted parts of the IC chip including the ground terminal and the feed terminal, and a portion of radiation conductor are disposed on the step.
 - 8. (Original) The antenna device of claim 7, wherein the step is molded by a dielectric.
- 9. (Original) The antenna device of claim 1, wherein the substrate is provided with cavities internally.
- 10. (Original) The antenna device of claim 1, wherein parasitic conductors electrically insulated from the radiation conductor are disposed on the substrate.
- 11. (Original) The antenna device of claim 1, wherein the substrate is formed from a flexible material.
- 12. (Original) The antenna of claim 1, wherein an insulation layer is provided on one of an entire surface of the ground conductor and a portion of the ground conductor.
- 13. (Currently Amended) A radio communication system having one of the antenna device of claim 1 to 12 dispose on a metal.
- 14. (New) A radio communication system having the antenna device of claim 3 to dispose on a metal.
- 15. (New) A radio communication system having the antenna device of claim 4 to dispose on a metal.
- 16. (New) A radio communication system having the antenna device of claim 5 to dispose on a metal.

- 17. (New) A radio communication system having the antenna device of claim 6 to dispose on a metal.
- 18. (New) A radio communication system having the antenna device of claim 7 to dispose on a metal.
- 19. (New) A radio communication system having the antenna device of claim 8 to dispose on a metal.
- 20. (New) A radio communication system having the antenna device of claim 9 to dispose on a metal.
- 21. (New) A radio communication system having the antenna device of claim 10 to dispose on a metal.
- 22. (New) A radio communication system having the antenna device of claim 11 to dispose on a metal.
- 23. (New) A radio communication system having the antenna device of claim 12 to dispose on a metal.
